## CHARACTERISTICS OF THE POPULATION

## INTRODUCTION

This second Population bulletin for the Territory of Hawaii presents data on the characteristics of the population, including sex, age, race, nativity, place of birth, citizenship, marital status, school attendance, highest grade of school completed, employment status, class of worker, occupation, industry, wage or salary income, and months worked in 1939. In the first Population bulletin, entitled "Number of Inhabitants," the total population of the Territory on April 1, 1940, was given for all of its political subdivisions, including counties, judicial districts, representative districts, census tracts, cities, towns, and villages. There remain to be presented for the Territory and for Honolulu city statistics on age by marital status, relationship to head of household, and education, data on occupation by age, wage or salary income, and class of worker, and on industry by race.

**Arrangement of tables.**—The tables in the present bulletin are arranged on the basis of the areas for which figures are presented. Tables 1 to 17 present statistics for the Territory as a whole and for Honolulu city. Tables 18 to 20 contain the figures for counties. Table 21 gives data by judicial districts and census tracts. Figures for cities of 5,000 to 100,000 are shown in tables 22 and 23. The amount of detail presented in this bulletin is generally greater for the larger places than for the smaller ones, and data from earlier censuses are presented for the larger areas only.

**Availability of unpublished data.**—The statistics in this bulletin presented for the Territory as a whole and for Honolulu city represent practically all of the data tabulated in this phase of the 1940 program. Although similar statistics have been tabulated for Hilo and Wailuku cities, and almost as much detail has been tabulated for counties and for Honolulu census tracts, it is not possible, because of space limitations, to publish the data in full detail.

These unpublished statistics, however, can be made available upon request, for the cost of transcribing or reproducing them. Requests for such statistics, addressed to the Director of the Census, Washington, D. C., will receive a prompt reply which will include an estimate of the cost of preparing the data.

## EXPLANATIONS AND DEFINITIONS OF TERMS

**Sex and race.**—Because of the importance of the classification of the population by sex, practically all of the data in this bulletin are presented separately for males and females. Moreover, as far as feasible, the data are also presented by race. Seven major race classifications are distinguished in the tabulations; namely, Hawaiian, part Hawaiian, Caucasian, Chinese, Filipino, Japanese, and "other races," the latter comprising mainly Koreans and Puerto Ricans. In the 1940 census, several revisions were made in the race classification. Portuguese, Spanish, and "other Caucasian" were combined into one group, "Caucasian"; persons from Puerto Rico were classified as a separate group because of special interest in their number; and all persons of mixed Hawaiian and other blood were classified as part Hawaiian. All statistics in this bulletin classifying the population by race are in accordance with the 1940 definition. The complete classification by race, sex, and nativity is shown in the following table:

POPULATION OF THE TERRITORY BY RACE, NATIVITY, AND SEX: 1940

RACE	ALL CLASSES			NATIVE		FOREIGN BORN	
	Total	Male	Female	Male	Female	Male	Female
* All races .....	425,359	245,135	176,185	214,645	158,079	30,490	82,123
Hawaiian .....	14,375	7,413	6,962	7,413	6,962	.....	.....
Part Hawaiian .....	49,035	24,650	25,385	24,650	25,377	.....	.....
Caucasian .....	103,791	64,473	39,318	60,034	35,806	4,439	3,512
Chinese .....	28,774	16,131	12,643	12,738	11,192	3,393	1,451
Filipino .....	32,569	49,791	11,778	40,791	11,778	.....	.....
Japanese .....	137,905	82,820	75,085	61,910	58,642	20,910	16,443

Puerto Rican .....	8,296	4,437	3,859	4,437	3,859	.....	.....
All others .....	579	313	266	264	254	29	12

**Nativity.**—In the classification by nativity, a person born in continental United States or in any of its territories or possessions is counted as native. Likewise included as native are the small number of persons who, although born in a foreign country or at sea, are American citizens by birth because their parents were American citizens.

**Place of birth.**—The native population is classified, with respect to place of birth, into five groups: Those born in the Territory of Hawaii, those born in the Philippine Islands, those born in Puerto Rico, those born in other United States territories or possessions (including American citizens born abroad or at sea), and those born in continental United States.

The foreign-born population is classified according to country of birth. All classifications of the 1940 population according to country of birth are based on the political boundaries of January 1, 1937, but were practically the same as in 1930.

**Age.**—The age classification is based on the age of the person at his last birthday before the date of the census, that is, the age of the person in completed years.

Age data for the Territory, Honolulu city, and counties are presented by 5-year periods up to 54 years and by 10-year periods to 74 years. For cities of 5,000 to 100,000 figures are presented by 5-year periods up to 34 years and 10-year periods from 35 to 74 years. Data are also available in various tables for additional age groups having some special significance, i. e., 21 years and over and the various groups shown in connection with school attendance and employment status.

**Citizenship.**—The classification of the foreign born by citizenship comprises two main groups, naturalized and alien; the second group is further subdivided into those having first papers (that is, those who have made formal declaration of intention to become citizens of the United States) and those having no papers. In addition, there is a third group made up of foreign-born persons for whom no report on citizenship was obtained. Since it is likely that most of these persons are aliens, they are often included with the aliens in summary figures for citizens and noncitizens.

**Marital status.**—In the classification by marital status four major groups are shown: Single, married, widowed, and divorced. In all censuses there were a few persons for whom the enumerators failed to report marital status. All these persons are here classified as single.

**School attendance.**—The school attendance tabulation for 1940 is based on the replies to the enumerator's inquiry as to whether the person had attended, or been enrolled in, any regular school or college between March 1 and April 1, 1940. Night schools or vocational schools were not included unless they were a part of the regular school system; and no correspondence schools were included. The school attendance question in the Census of 1930 applied to a somewhat longer period, namely, the seven months between September 1, 1929, and April 1, 1930. Furthermore, in the earlier censuses the question was not restricted as to type of school.

**Highest grade of school completed.**—In 1940 the census, for the first time, included a question on the formal educational attainment of each person. The question on the schedule asked for the last full grade that the person had completed in the regular school system—public, private, or parochial school, college, or university. This question replaced the inquiry on illiteracy included in previous censuses and provides data on educational status, a characteristic which is significant for every population group, especially in combination with other characteristics.

The tabulations on last year of school completed which are presented in this bulletin, are restricted to persons 25 years old and over, practically all of whom have completed their formal education. All tables presenting data on education include the median year of school completed. The median year of school completed may be defined as that year which divides the population group into equal parts, one-half having completed more schooling, and one-half having completed less schooling than the median. These medians are expressed in terms of a continuous series of numbers representing years of school completed. For example, the completion of the first year of high school is indicated by 9 and of the last year of college by 16.

**Employment status.**—In the classification by employment status in the 1940 Census of Population, all persons 14 years old and over are classified on the basis of their activity during the week of March 24 to 30, 1940, into two principal groups: (1) Persons in the labor force, including those employed for pay or profit or at unpaid family work, those on public emergency work, and those seeking work; and (2) persons not in the labor force. The latter group includes persons reported as engaged in their own home household; those in school; those unable to work; all inmates of penal and mental institutions and homes for the aged, infirm, and needy, regardless of their activity during the census week; others not employed, not on public emergency work, and not seeking work; and persons for whom employment status was not reported.

The various categories of persons in the labor force are defined below:

**Employed (except on public emergency work).**—The group classified as employed includes: (a) Persons who worked for pay or profit at any time during the week of March 24 to 30, 1940, in private work or nonemergency Federal, Territorial, or local government work, or assisted without pay on a family farm or in a family business; and (b) persons not actually at work and not seeking work during the week of March 24 to 30, 1940, but with jobs, businesses, or professional enterprises from which they were temporarily absent because of vacation, illness, industrial dispute, bad weather, or lay-off not exceeding 4 weeks with definite instructions to return to work on a specific date. The group "Employed (except on public emergency work)" includes not only employees but also proprietors, farmers, other self-employed persons, and unpaid family workers.

**On public emergency work.**—This category includes persons who, during the week of March 24 to 30, 1940, were at work on, or assigned to, public emergency work on projects conducted by the Work Projects Administration (WPA), the National Youth Administration (NYA), or the Civilian Conservation Corps (CCC).

In the interpretation of the data for persons on public emergency work, allowance must be made for the misclassification of considerable numbers of public emergency workers. The

number of persons reported in the census as on public emergency work in Hawaii was 2,326, whereas the number recorded on the pay rolls of the Federal emergency work agencies at the time of the census was 3,568.

**Seeking work.**—This category represents persons without work of any sort in the week of March 24 to 30, 1940, who were actively seeking work during that week. The group seeking work was subdivided into experienced workers and new workers, the latter being persons who had not previously worked full time for 1 month or more. Persons seeking work for whom a report on work experience was lacking were classified as experienced workers.

Persons with a job but not at work were classified as employed because the strict definition of this group and the fact that these persons were reported as not seeking work, tended to eliminate all except those who would shortly return to the employment from which they were temporarily absent.

**Number of unemployed.**—The total number of unemployed, as usually defined, includes (1) persons seeking work and without any form of public or private employment and (2) those on public emergency work programs established to provide jobs for the unemployed. Because of the misclassification of public emergency workers, the census total of these two groups understates the amount of unemployment. More satisfactory figures can be obtained by adding to the census figures for persons seeking work, the number of persons on pay rolls of the Federal emergency work agencies at the time of the census. This procedure yields a total of 8,678 unemployed persons.

**Comparison of 1940 data for the labor force with previous data for gainful workers.**—The 1940 data for the labor force are not directly comparable with the census statistics for gainful workers in 1930 and earlier years because of differences in definition. "Gainful workers" were persons reported as having a gainful occupation, that is, an occupation in which they earned money or a money equivalent, or in which they assisted in the production of marketable goods, regardless of whether they were working or seeking work at the time of the census. The labor force is defined in the 1940 census on the basis of activity during the week of March 24 to 30, and includes only persons who were employed, seeking work, or on public emergency work in that week. Thus seasonal workers who were neither working nor seeking work during the census week were excluded from the labor force in 1940; such persons were classified for the most part as gainful workers in 1930. In addition certain classes of persons, such as retired workers, some inmates of institutions, and recently incapacitated workers were frequently included among gainful workers in 1930, but in general, such persons are not in the 1940 labor force. On the other hand, the 1940 labor force includes persons seeking work without previous work experience, that is, new workers, and persons reported as in the labor force for whom neither occupation nor industry was entered on the schedule. Most of the relatively few new workers at the time of the 1930 and earlier censuses were probably not counted as gainful workers. Likewise, some persons who were actually gainful workers, but for whom neither occupation nor industry was reported, were not included in the gainful worker figures for 1930 and earlier years.

The 1940 labor force figures are restricted to persons 14 years old and over, whereas the number of gainful workers shown in earlier censuses included persons 10 years old and over. The number of workers 10 to 13 years old has become relatively small and no longer justifies the additional burden of enumeration and tabulation necessary to retain the 10-year age limit. In making comparisons between the 1940 labor force data and the gainful worker statistics in earlier census reports, the slight difference in age limits should be taken into consideration. The gainful worker statistics shown in this bulletin for earlier censuses exclude those 10 to 13 years old.

**Class of worker.**—Class-of-worker statistics for employed workers (excluding persons on public emergency work) are given

In table 12, which shows the numbers of wage or salary workers, employers and own-account workers, unpaid family workers, and workers who failed to report class of worker. The composition of the various categories is described below:

**Wage or salary workers.**—This class consists of persons who worked as employees for wages or salary (in cash or kind). It includes not only factory operatives, laborers, clerks, etc., who worked for wages, but also persons working for tips or for room and board, salesmen and other employees working for commission, and salaried business managers, corporation executives, and government officials.

**Employers and own-account workers.**—This group consists of persons who operated their own business enterprises. It includes not only the owner-operators of large stores and manufacturing establishments, but also small merchants, independent craftsmen, farmers, professional men, peddlers, and other persons conducting enterprises of their own. It does not include managers paid to operate businesses owned by other persons or by corporations; such workers are classified as wage or salary workers.

**Unpaid family workers.**—This class is composed of persons who assisted without pay on farms or in stores or other enterprises operated by other members of their families. The great majority of unpaid family workers are farm laborers.

**Occupation and industry statistics.**—In the 1940 Population Census of Hawaii, inquiries relating to occupation and industry were made for all experienced persons 14 years old and over in the labor force during the census week (March 24 to 30, 1940). The occupation and industry data presented in this bulletin, however, are limited to employed persons (except those on public emergency work), and relate to their jobs during the census week.

**Occupation classification.**—The detailed occupation classification used in the 1940 Population Census for Hawaii contains 378 titles.<sup>1</sup> In this bulletin, the detailed occupation classification is used only for the presentation of occupation statistics for employed workers (except those on public emergency work), by sex, for the Territory and for Honolulu city (table 13). In other tables, occupation data are shown in terms of 12 major occupation groups, representing major groupings of the detailed classification.

**Industry classification.**—The industry classification used in the 1940 Census for Hawaii contains 131 titles.<sup>2</sup> The detailed industry classification is used here only for the presentation of industry statistics for employed workers (except those on public emergency work), by sex, for the Territory and for Honolulu city (table 15). In other tables, a condensed list of 44 industries is used. This abbreviated list represents selections and combinations of the titles in the complete classification.

**Coverage of industry classifications "Government" and "Domestic service."**—The industry classification "Government (not elsewhere classified)" does not include all persons employed by governmental agencies. Persons are included in this classification only if they were engaged in activities that are peculiarly governmental functions. Government employees who were engaged in activities that are commonly performed by employees of private enterprises are included in the industry classification in which their activities fell. For example, a tax collector is included in the industry classification "Government," but a carpenter employed on a Federal building project is classified in the category "Construction." The total number of persons employed by governmental agencies, therefore, cannot be obtained from the industry classification.

<sup>1</sup> With some exceptions, this classification is convertible to the 327-item Convertibility List of Occupations, which was prepared by the Joint Committee on Occupational Classification (sponsored by the Central Statistical Board and the American Statistical Association) to increase comparability among occupational statistics compiled by various governmental and private sources.

<sup>2</sup> This classification is a condensation of the Standard Industrial Classification of 1,411 titles, which was prepared for use in classifying industry returns from workers or members of their families, by the Joint Committee on Occupational Classification, in cooperation with the Committee on Industrial Classification sponsored by the Central Statistical Board.

The industry group "Domestic service" is somewhat more inclusive than the major occupation group "Domestic service workers," which is limited to "Housekeepers, private family," "Landresses, private family," and "Servants, private family." The industry classification "Domestic service" includes not only these workers but also persons in occupations such as practical nurse, chauffeur, and gardener, if they were employed by private families.

**Comparison of occupation and industry statistics for 1940 with data from earlier censuses.**—No comparisons of the 1940 census data on occupation and industry with similar data from previous censuses are included in this bulletin. Such comparisons are complicated by three important considerations.

First, gainful workers, the group for which occupation and industry statistics were presented in previous censuses, are not strictly comparable with the 1940 labor force.

Second, the occupation and industry data shown here do not cover the entire labor force, being limited to employed persons.

Third, the 1940 classifications of occupation and industry differ from those used in earlier censuses, with respect to arrangement and content of titles. For example, in 1930, most of the occupation titles were grouped under a few major industrial headings ("Agriculture," "Forestry and fishing," "Extraction of minerals," etc.), based upon the industry in which the occupation was most commonly followed. In 1940, however, the occupation titles are grouped into 12 major occupation groups ("Professional and semiprofessional workers," "Craftsmen, foremen, and kindred workers," "Operatives and kindred workers," etc.), regardless of industrial attachment.

**Wage or salary income and receipt of other income.**—In the 1940 census, all persons 14 years old and over (except inmates of specified institutions) were asked to report the amount of money wage or salary income received in 1939. (Those who received over \$5,000 were required only to report that they had received more than that amount.) Persons 14 years old and over were also asked to report whether they had received \$50 or more from sources other than money wages or salaries in 1939. This comparatively small amount was chosen in order to identify those persons whose incomes, for all practical purposes, were limited to receipts from wages or salaries. A question regarding the exact amount of nonwage income was not included because of the very considerable additional burden of enumeration that such a question would have entailed.

**Wage or salary income, as defined for the purposes of the 1940 census, includes all money received by persons as compensation for work or services performed as employees, including commissions, tips, piece-rate payments, bonuses, etc., as well as receipts commonly referred to as wages or salaries. Enumerators were instructed not to consider as wage or salary income receipts from business profits, fees, travel reimbursements, sale of crops, unemployment compensation, etc., nor compensation in forms other than money, such as meals, lodging, clothing, fuel, etc.**

"Other income" includes all income other than money wages or salaries, such as income from roomers or boarders, business profits, professional fees, income in kind, receipts from the sale of farm products, rents, interest, dividends, unemployment compensation, direct relief, old-age assistance, pensions, annuities, royalties, and regular contributions from persons other than members of the immediate family. Other income does not include receipts in the form of lump-sum insurance settlements, occasional gifts of goods or money, inheritances, receipts or profits from the sale of properties (unless the person earned his living by buying and selling such properties) or reimbursements for travel expenses.

In this bulletin, the group of persons for whom the receipt or nonreceipt of other income was not reported is combined with the

## HAWAII.

group without other income of \$50 or more, since the majority of the persons failing to report probably had no other income.

Data on wage or salary income and other income in 1939 are presented in table 16 for the experienced lat or fores, which comprises employed persons, those on public emergency work, and persons other than new workers seeking work, during the week of March 24 to 30, 1940. In this table statistics are presented separately for wage or salary workers and for other experienced workers (that is, for the combination of employers, own-account workers, unpaid family workers, and persons for whom class of worker was not reported). The group of wage or salary workers is subdivided into (a) private and nonemergency government workers, and (b) public emergency workers. The category "public emergency workers" includes both persons who were on public emergency work during the census week and persons seeking work during that week who had last worked on public emergency projects. This category is therefore somewhat larger than the employment status group "on public emergency work."

The statistics on wage or salary income and receipt of other income refer to the calendar year 1939, while the classifications by employment status and class of worker refer to the week of March 24 to 30, 1940. Because of the rapid turn-over of emergency project employment, the difference in time reference is probably most important in connection with the wage or salary income distribution of public emergency workers. A considerable proportion of the wage or salary income reported by public emergency workers was derived from private employment. Likewise, some persons who were employers, own-account workers, and unpaid family workers at the time of the census had been employed as wage or salary workers during a part or all of the year 1939, and reported themselves as having received various amounts of wage or salary income.

Two important factors may have made for inaccurate reporting of wage or salary income. First, persons who received their compensation in many installments of irregular amounts may not have been able to determine accurately the total amount received. Second, some informants who replied to the census inquiries for the whole family undoubtedly did not know the precise amount of wage or salary income received by each mem-

ber. Nevertheless, the statistics present a reasonably accurate picture of the amount and distribution of wage or salary income received in 1939.

**Months worked in 1939.**—In order to show the relationship between income and amount of employment during the year, statistics on wage or salary income and receipt of other income are presented for wage or salary workers classified according to number of months worked in 1939. The classification by number of months worked was obtained from a question regarding the number of weeks worked for pay or profit, including public emergency work, or at unpaid family work, which was asked for all persons 14 years old and over except inmates of certain institutions. For persons with periods of part-time work, the report was to be made in terms of equivalent full-time weeks, a full-time week being defined as the number of hours locally regarded as full time for the given occupation and industry. Paid vacations or other absences with pay were included in the number of weeks worked.

The returns for weeks worked in 1939 have been converted into months in the tables in this bulletin, because a large proportion of the reports were only approximate, and did not represent valid statements of the precise number of weeks of work. The groupings of months worked that are used in this bulletin are listed below, with their equivalents in terms of the original reports of weeks worked.

Number of months worked	Number of weeks worked
Less than 6 months, or not reported.	0 to 23 weeks, or not reported.
6 to 8 months.....	24 to 35 weeks.
9 to 11 months.....	36 to 49 weeks.
12 months.....	50 to 52 weeks.

Data on months worked in 1939 were not tabulated for employers, own-account workers, and unpaid family workers. For such workers, the data on months worked are less significant and less reliable than for wage or salary workers. Moreover, for workers in these groups, the amount of employment in 1939 has little relation to the amount of wage or salary income received.
