

Dear nrharisEvArasika svAmin:

Srlmad azhagiyasingar tiruvaDigaLE SaraNam.

Since lunar eclipse occurs on full-moon day, moon & sun are in opposition and moon-set & sun-rise are in the morning, unlike on amA-vAsya days when moon & sun reside together and, therefore, rise together in the morning and set together in the evening. (amA: together; vAsya: reside)

If you agree, you may want to announce corrections.

"Moksham - ~~7:24 PM~~ **8:24 AM** EDT (~~evening~~ **morning**)"

Best Regards.
