# REVISION CHANGE LOG

REV LTR	CHANGE NO	DESCRIPTION	DATE
	ERRATA	<p><b>BASIC ISSUE (MSFC-DOC-1631)</b></p> <p>Issued correct illustration for the GO2 Vent Hood Purge, Pad B configuration; and, the correct area and location for the Hydrogen Leak Detectors.</p>	JULY 28, 1988
	1	<p>STS-27R- Added two previous DFI Hydraulic Fluid Temperature Sensors to the return lines from the ET/ORB disconnect actuators (MSID V58T0130A and V58T083A). Changed the MSID Index because of several omissions, and the previous release, by Errata, of the GOX Vent Hood Purge, Pad B Configuration which resulted in adding new MSID's and deleting others. Other changes are ancillary or editorial.</p>	AUGUST 8, 1988
	2	<p>STS-29- Added reference to recently installed venturi flow meters and instrumentation in ET intertank and nose cone purge systems. Updated the MSID index to reflect current measurements shown in the MLD. Numerous editorial and typo corrections.</p>	NOVEMBER 7, 1988
N/A	N/A	<p>This issue of the MPS MLD is published as a Rockwell document. Changes since Change Package 2 include: addition of ET AADS nose cone MSID's; addition of ET LH2 disconnect HE leak detectors; clarification of ssme detail sensor location diagrams, plus major repagination in Sections 7.0 and 8.0.</p>	JANUARY 19, 1989
A		<p>This revision of the MPS MLD incorporates a description of changes between Pad B and Pad A since STS32 will launch from Pad A. In general, the differences are minor.</p>	JULY 17, 1989
B		<p>This revision of the MLD is a reprint using new diagrams for most schematics. New diagrams added include: 2.10 LOX Transfer Line Leak Check, Drain Assist, Purge; 9.1 Primary Mass Spec. System; 9.2 Back-Up Mass Spec. System.</p>	DECEMBER 1989
			JULY 1990

## REVISION CHANGE LOG

REV LTR	CHANGE NO	DESCRIPTION	DATE
C		<p>This revision of the MPS MLD incorporates MSID changes authorized by DCR's DC001485 (HPOTP strains) and DC001461 (servo currents), and includes an expansion of Section 6.0, Hydraulics, to include some of the system MSID's. Additional detail is included on location of H2 leak detectors LD54 and LD55, and the AADS nose cone pressure measurements. All 11" x 17" foldout pages have been eliminated to simplify reproduction, and the total document is now produced by word processor.</p>	OCTOBER 1990

## ACKNOWLEDGEMENT

THIS DOCUMENT IS FOR INFORMATION ONLY. IN THE EVENT OF A CONFLICT BETWEEN THIS DOCUMENT AND FORMAL DOCUMENTATION, THE FORMAL DOCUMENTATION SHALL TAKE PRECEDENCE.

**THIS PAGE INTENTIONALLY BLANK**

## **1.0 GENERAL**

### 1.1 SCOPE

Formal documentation required for measurement sensor installation is too cumbersome for understanding sensor location for data evaluation purposes. The intent of this document is to depict sensor locations, by measurement number, for user convenience and information only. It does not always represent the actual hardware configuration because shuttle element drawing changes are not available to this office on a routine, timely basis. User comments are encouraged in order to correct errors as early as possible.

The following components, subsystems, and facility/GSE for KSC are represented:

- External Tank (ET)
- Orbiter Main Propulsion System (MPS)
- MPS Hydraulic System
- Space Shuttle Main Engine (SSME)
- MPS Pneumatic Service Panels
- MPS Propellant Loading Facility
- Hazardous Gas Leak Detection System
- Hydrogen Leak Detectors
- Fire Detectors

### 1.2 GENERAL INFORMATION

#### FUTURE CHANGES

Updates to this document will be provided in the form of page changes only or complete reprints as applicable.

#### APPENDIX

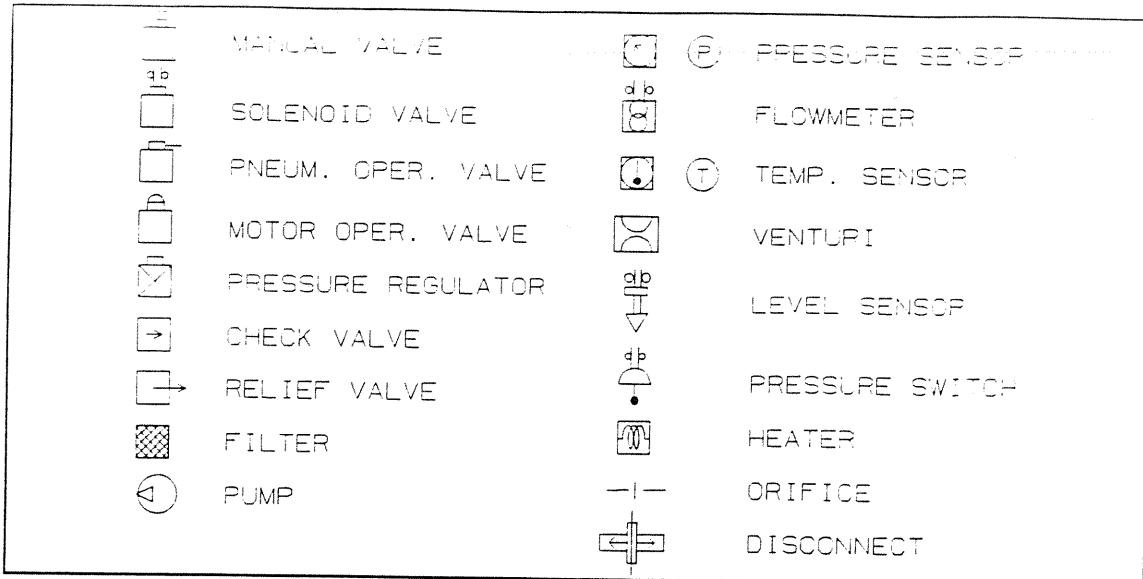

The appendix is included to aid in finding a measurement quickly and to provide general vehicle and facility descriptions. If the measurement number is known, the MSID/FD subsection index provides the corresponding subsection number.

#### ILLUSTRATIONS

System orientation is shown by the flight "bird". Sensor clocking location in the external tank and propellant lines is generally not shown. Zone numbers, where included, refer to the respective zone location of the first letter of the measurement number.

SSME measurements common to all three engine positions have "E" for the fifth, sixth, or seventh character instead of 1, 2, or 3.

#### 1.4 MEASUREMENT (MSID & FD) NO. DESCRIPTION

##### 1.4.1 FLIGHT VEHICLE MEASUREMENT NUMBER DESCRIPTION

The six field numbers for each measurement are defined for user convenience (refer to JSC-08220 MML).

###### FIELD NO. 1 (FIRST CHARACTER)

E - Main Engine  
 T - External Tank  
 V - Orbiter Vehicle

###### FIELD NO. 2 (SECOND & THIRD CHARACTERISTICS)

07 - Aerodynamic/Thermodynamics  
 08 - Structural Dynamics  
 09 - Thermal Protection System (TPS)  
 35 - Aft Fuselage  
 38 - Purge Vent, And Drain  
 41 - Main Propulsion  
 58 - Hydraulic  
 79 - Flight Control

###### FIELD NO. 3 (FOURTH CHARACTER)

A - Acceleration  
 C - Current  
 D - Vibration  
 E - Power  
 G - Force/Stress/Strain  
 H - Position/Attitude  
 K - Stimulus  
 L - Velocity  
 M - Multi-Data  
 P - Pressure  
 Q - Quantity  
 R - Rate  
 T - Temperature  
 V - Voltage  
 W - Time  
 X - Discrete Event  
 Y - Acoustics

###### FIELD NO. 4 (FIFTH THRU EIGHT

0001 - 8999 OFI Measurements  
 9000 - 9999 DFI Measurements  
 (measurement identifying number,  
 unique for subfields 1 & 2)

FIELD NO. 5 (NINTH CHARACTER)

DATA TYPE			DATA ROUTING
ANALOG	EVENT	DIGITAL	(MAY BE MULTIPLE)
A	E	D	OFI/DFI
C	X	B	Flight Critical
R	U	L	RF Uplink
G	N	T	Ground Decoder
H	W	-	Ground Hardware
V	Y	J	System Management/Payload
F	-	-	Continuous Signal
-	-	P	Parent Word

FIELD NO. 6 (TENTH CHARACTER, IF USED)

\*Identifies software routing (refer to MML)

1.4.2 GROUND SUPPORT EQUIPMENT MEASUREMENT NUMBER DESCRIPTION.

The six subfield numbers for each measurement are defined for user convenience (refer to KSC DL-NED NO. 009)

SUBFIELD NO. 1 (FIRST CHARACTER)

G - Ground Support Equipment  
F - Facility

SUBFIELD NO. 2 (SECOND & THIRD CHARACTERS)

EC - Environmental Control  
GN - Gaseous Nitrogen  
GO - Gaseous Oxygen  
HE - Gaseous Helium  
LH - Liquid Hydrogen  
LO - Liquid Oxygen  
WI - Water (Industrial)

SUBFIELD NO. 3 (FOURTH CHARACTER)

Same as flight vehicle measurement field no. 3.

SUBFIELD NO. 4 (FIFTH THRU EIGHTH CHARACTERS)

Measurement identifying number, unique for subfields 1 & 2.

SUBFIELD NO. 5 (NINTH CHARACTER)

A - Analog  
E - Discrete event  
X - Discrete event software signal

1.4.3 ENVIRONMENTAL, SPECIAL, AND METEROLOGICAL MEASUREMENT NUMBER DESCRIPTION.

The five subfield numbers for each measurement are defined for user convenience (refer to KSC DL-NED-3).

SUBFIELD NO. 1 (FIRST CHARACTER)

K - DL-NED-3 designator for environmental, special, and meterological measurements system.

SUBFIELD NO. 2 (SECOND AND THIRD CHARACTER)

SR - GSE subsystem (structural) in major Shuttle element.

SUBFIELD NO. 3 (FOURTH CHARACTER)

Same as flight vehicle measurement field No. 3.

SUBFIELD NO. 4 (FIFTH THRU EIGHTH CHARACTERS)

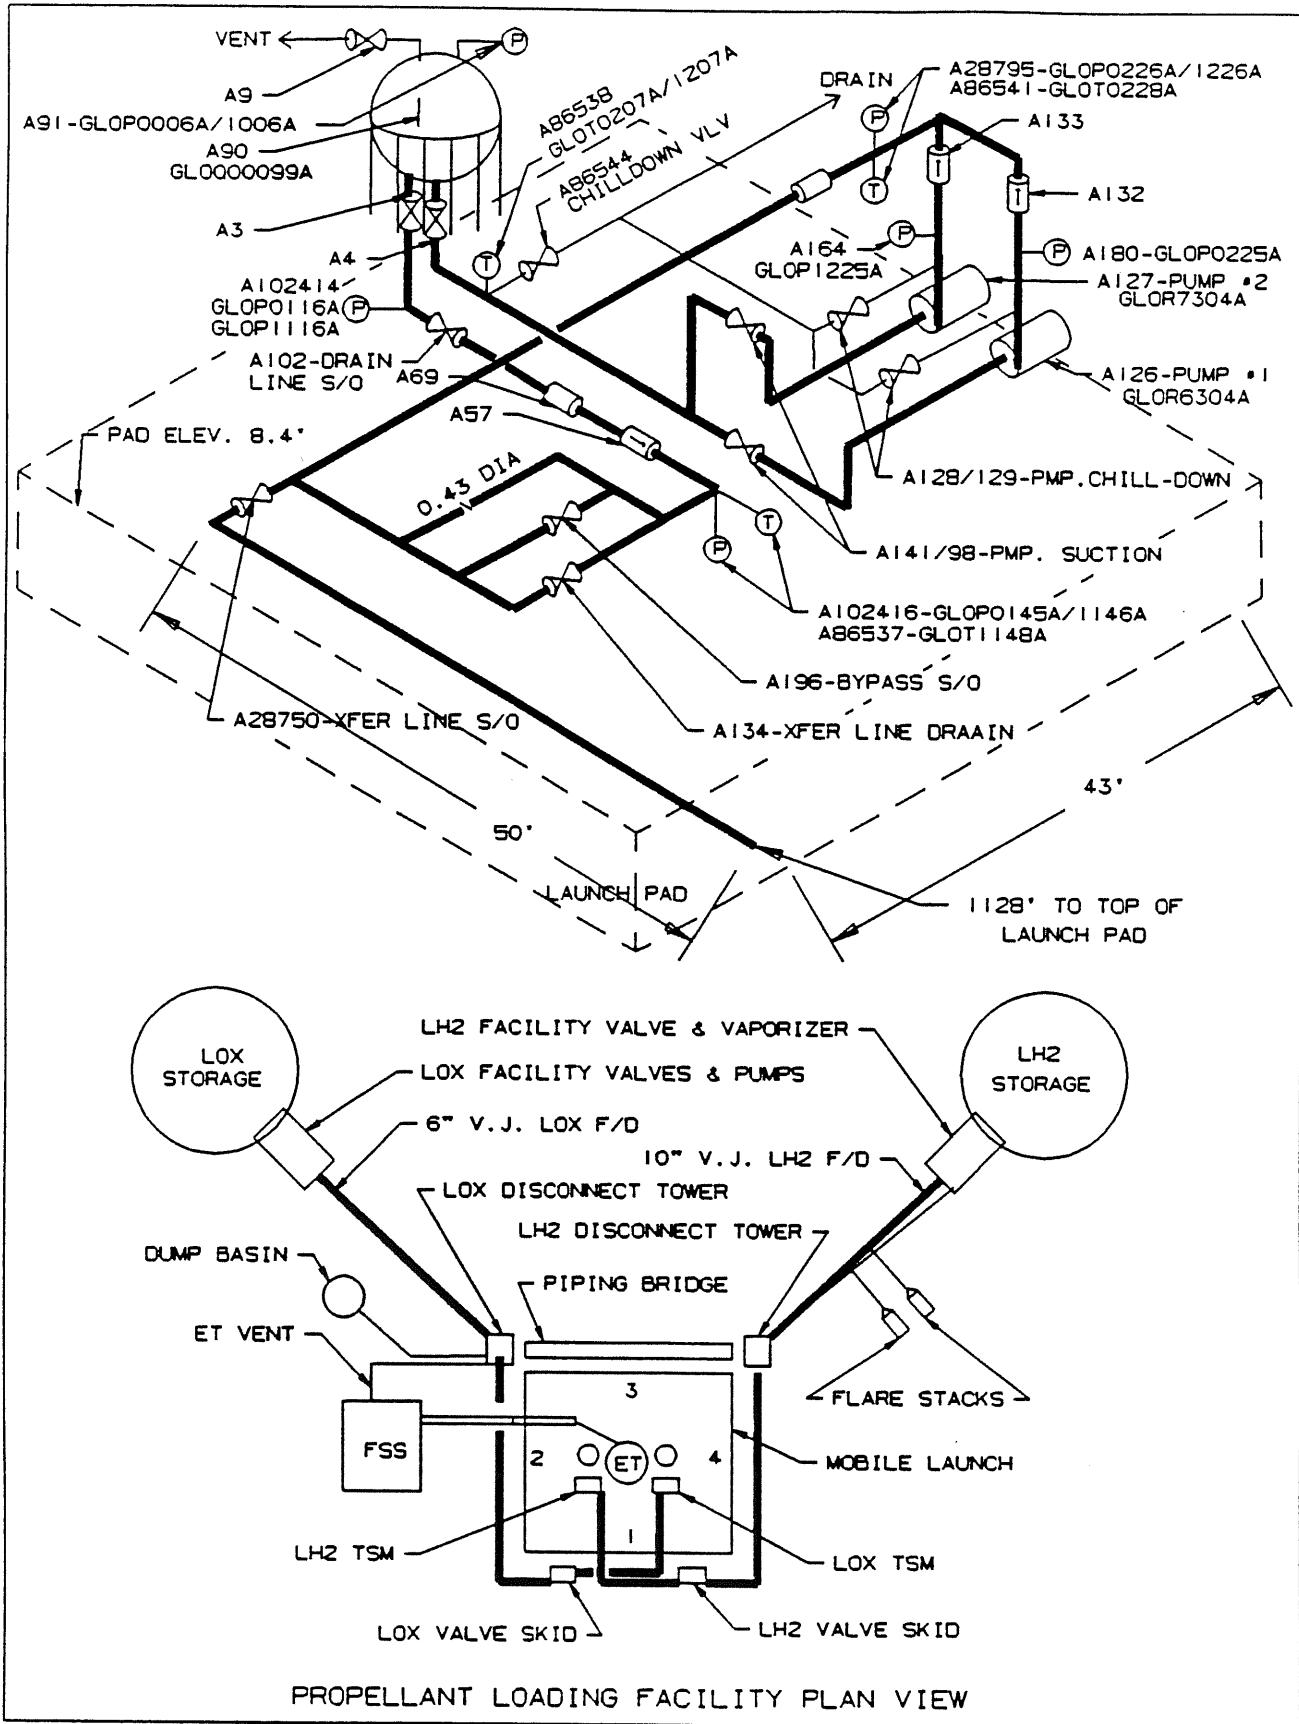

Measurement identifying number, unique for subfields 1 and 2.

SUBFIELD NO. 5 (NINTH CHARACTER)

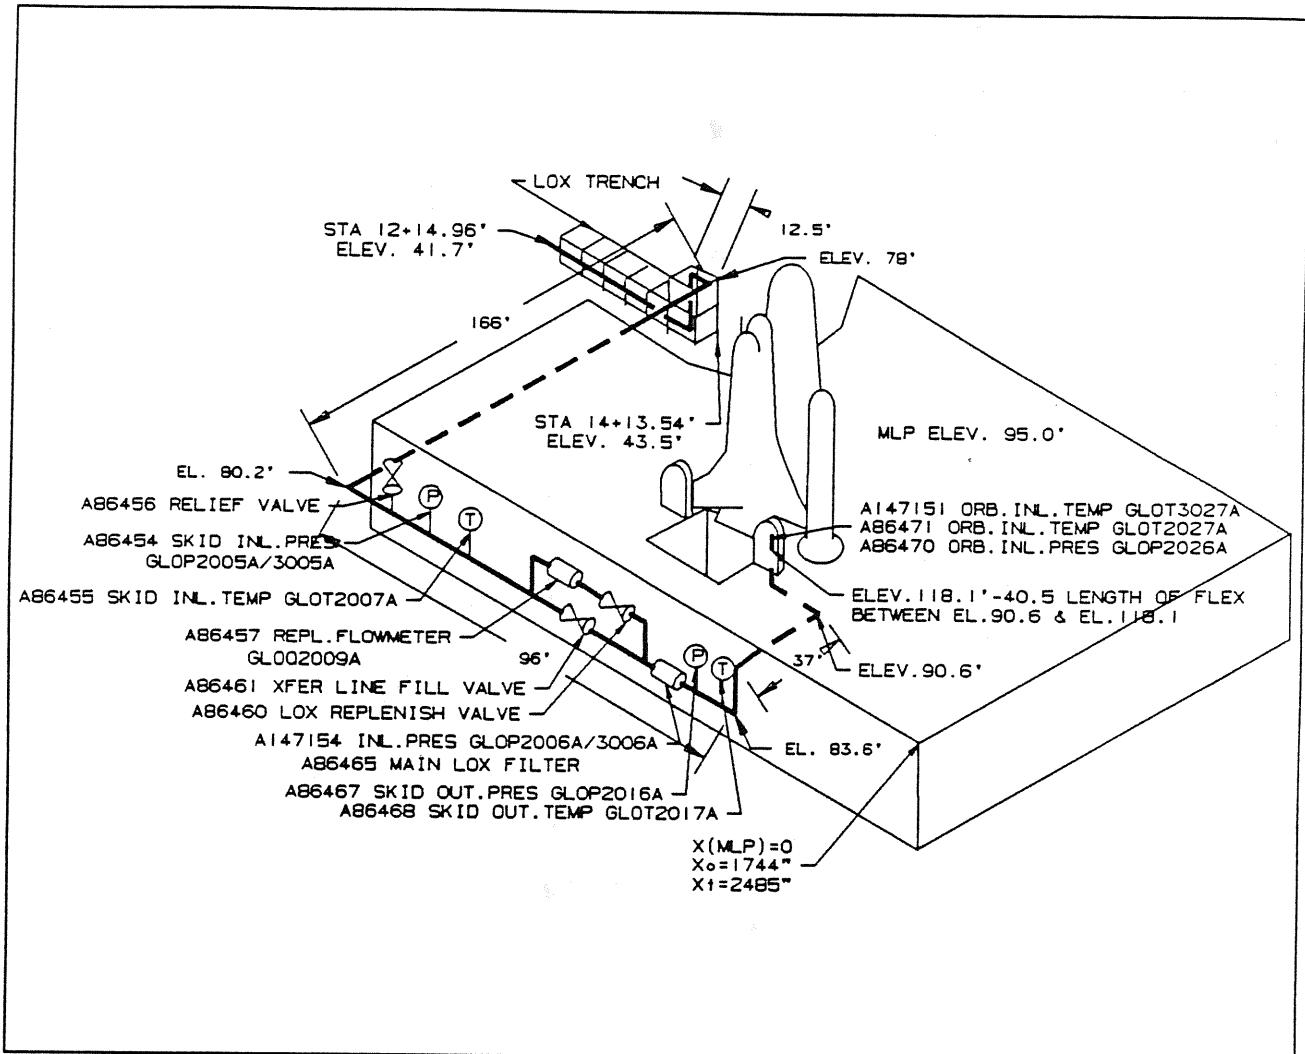

A - Signal transmission type (analog).

## **4.0 SPACE SHUTTLE MAIN ENGINE (SSME)**

---

---

NOTE 1: Most engine measurements are common to all three engines. The fifth, sixth, or seventh character in the msid number normally designates engine position (i.E. "1", "2", or "3"). To prevent needless duplication of MSID listings, an "e" is used throughout section 4 in place of the this character to reflect commonality.

NOTE 2: The key number on pgs. 4-3 Thru 4-5 is used throughout section 4.0 as an aid to locating sensor installation detail.

MS SYSTEM  
6889

## 9.1 PRIMARY MASS SPECTROMETER

THE MASS SPECTROMETER SAMPLES FROM THE AFT COMPARTMENT, THE INTERTANK, THE PAYLOAD BAY, THE MIDBODY, AND THE LH2 TAIL SERVICE MAST. SAMPLE LINES FOR THE ORBITER ARE ROUTED THROUGH THE LH2 T-O UMBILICAL. THE ET/IT SAMPLE LINE IS ROUTED THROUGH THE ET VENT UMBILICAL (GUCP). SAMPLE PICK UP POINTS ARE:

<u>COMPARTMENT</u>	<u>SENSE PORT LOCATIONS</u>
AFT COMPARTMENT	TWO PORTS JUST INSIDE THE LEFT AND RIGHT VENT DOORS (8 & 9).
INTERTANK 890	TWO PORTS NEAR THE PLUS Z AXIS NEAR STATIONS AND 1028. A THIRD PORT IS NEAR THE MINUS Z NEAR STATION 890.
AXIS	
PAYOUT BAY	TWO PORTS ON THE FORWARD WALL OF THE 1307 BULKHEAD APPROXIMATELY CENTERED IN PAYLOAD BAY AREA.
MID BODY	TWO PORTS ON THE FORWARD WALL OF THE 1307 BULKHEAD APPROXIMATELY CENTERED IN THE AREA UNDERNEATH THE PAYLOAD BAY LINER.
LH2 TSM	TOP OF TSM NEAR LD30 PORT.

MULTIPLE PORTS FOR EACH COMPARTMENT FEED INTO A SINGLE SAMPLE LINE FOR THAT COMPARTMENT.

THE MASS SPEC IS MANUALLY CONTROLLED FROM THE FIRING ROOM CONSOLE WITH REMOTE CONTROL VALVES. ONLY ONE COMPARTMENT IS SAMPLED AT A TIME. CYCLE TIME FROM ONE COMPARTMENT TO ANOTHER IS ON THE ORDER OF 30 SECONDS. TRANSIT TIME FROM AN ACTUAL LEAK TO THE MASS SPEC TAKES IN EXCESS OF 20 SECONDS WITH 8 SECONDS REQUIRED TO CYCLE THROUGH EACH GAS (ARGON, HELIUM, HYDROGEN, OXYGEN).

SPAN AND ZERO GAS BOTTLES ARE SAMPLED PERIODICALLY TO CALIBRATE THE MASS SPEC WITH KNOWN CONCENTRATIONS. THE TEST GAS BOTTLE PROVIDES A VERIFICATION OF THE AUTOCAL AT CONCENTRATIONS NEAR NEEDED OPERATING VALUES.

## 9.2 BACK-UP MASS SPECTROMETER

## 9.2 BACKUP MASS SPECTROMETER

THE BACKUP MASS SPECTROMETER USES THE SAME COMPARTMENT SAMPLE LINES AS THE PRIMARY MASS SPECTROMETER. OPERATION IS SIMILAR EXCEPT IN ADDITION TO ARGON, HELIUM, HYDROGEN, AND OXYGEN; THE BACKUP ALSO SAMPLES FOR NITROGEN.

### ASSOCIATED MSID'S
